

MILESTONE 2

Soo-Hyun Yoo

1/30/15

FSA:

The symbol table will store either $\langle \text{type} \rangle$ or $\langle \text{type}, \text{string} \rangle$ pairs, depending on whether or not the type is self-descriptive. For example, the boolean type will be self-descriptive, whereas an ~~string~~ actual boolean constant will need to be stored as a $\langle \text{type}, \text{string} \rangle$ pair.
